At NICS our target is to provide the right candidate for the role. In order to attain the capability to provide any solution, Attitude, Skill and Knowledge ought to be there. We have a well versed and proficient team which is essential to classify the potential candidates not only on the basis of their attitude but also on the domain knowledge – this leading attribute would indeed differentiate and also assists us in ensuring the clients get the best fit resources for their roles

We use our own developed innovative placement methodology called “**SEVA**” for our hiring process to ensure;

High potential with

Niche skills are

Appropriately placed adhering to the

Committed SLAs at a

Competitive cost”

OUR RESEARCH

Standing by the 4th Vision; **“Be the trusted consultant to build and protect your most precious commodity – Human Capital”**, NICS is committed to provide the solution through a suitable cost effectiveness process model called **“SEVA®”**. NICS researchers identified the gaps in the existing process and came up with a structured approach which is derived in SEVA® model

To explain the outcome of our research on the existing hiring process we discovered that – most of the organizations are involving placement agencies for hiring right candidates with the expectations that;

- The end to end recruitment process can be speedup
- Effort spent by hiring managers to identify the most suitable matching profile for the position can be minimized
- Human Resource executive can spend minimal effort to filter out the profiles for hiring managers
- Probability of hiring a suitable candidate on time would be very high

However, the problem statement is explained the reality

“Hiring manager / Technical experts spends more time and effort to screen a CV and select a candidate than that of placement agency, therefore the cost of hiring a suitable candidate becoming costlier”

**M

L**

"It is more important to reach the people who count us than to count the people we reach"

Our Robust search research function creates an environment in which we continuously recruit high potential teams by design. Our SEVA Methodology is an example of that.
